

Superconducting Magnets and Low Temperature Environments for Spectroscopy Applications

G. B. Ferguson

Oxford Instruments America Inc, Concord MA 01720

Oxford Instruments is a world leader in research instrumentation, with over 40 years experience in cryogenics, superconductivity and vacuum technology. Latest products and developments will be presented such as the MicroStat HiRes, the first microscope cryostat to offer sub-micron spatial resolution and interface to a large range of microscopes. The Microstat BT provides a unique environment for magneto-optical microscopy whilst the Spectromag offers a versatile platform magneto-optical spectroscopy in a wide range of application areas.
